Strategy assumptions and data coverage

Latest saved strategy: HA high breakout, BB(20,2), real-price VWAP; RVOL disabled.

Confirmation on the next completed HA bar; buy the following real bar open.

Initial signal HA-low stop; exit below prior completed BB middle; square off at 15:20.

Whole shares, no leverage, 0.5% of current equity risk per trade (initially INR 500); max 3/day.

Fees: 0.05% per side; adverse slippage: 0.05%; tick assumption INR 0.01.

These are existing illustrative cost assumptions, not a verified brokerage/tax schedule.

Only complete regular sessions used. No missing bars filled and no parameter optimization.

Excluded: 2025-05-06 (71 bars), 2025-10-21 (13 bars), 2026-09-09 (19 bars).

Latest CSV ends 2026-09-09 10:45; today's unfinished session is excluded.

OpenStatz win rate/profit factor use daily returns; P&L report uses individual trades.

OpenStatz drawdown uses day-end equity; main report samples every 5-minute close.

Reference: same CSV ATHERENERG buy-and-hold before costs; NIFTY data not supplied.

Corporate-action adjustment status is unverified. Results use the supplied prices as-is.
